The Zinsl protein was isolated form human placenta, and is believed to be a new version of the mature protein of placentin, having disulphide bonded A and B chains. The protein can be used for stimulating the proliferation of pancreatic islets to increase insulin secretory capacity of mammals. In particular it can be used for the treatment of diabetes. It can also be used for stimulating in vitro proliferation of pancreatic islet cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

This is the amino acid sequence of a novel member of the insulin growth hormone family designated early placental insulin like (EPIL) protein or placentin. The encoding gene has been found to be expressed exclusively in the early placental tissue with a small amount in full term placental tissue. No other tissue expresses this gene. The gene was obtained from a CDNA library derived from mRNA isolated from cytotrophoblasts derived from first trimester placental tissue using, as a probe, a fragment of the gene amplified by primers AAT10276-7. Although the specific activity of the protein remains to be elucidated, it is thought that the protein will induce tyrosine phosphorylation of cellular proteins and may have growth factor-like activities e.g. human growth factor type 1 or lactation promoter activities. It may also be used to regenerate e.g. nerver margine skip or hone tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Insulin growth hormone family; early placental insulin like protein; placentin; placental tissue; cytotrophoblast; trimester; probe; primer; amplification; polymerase chain reaction; tyrosine phosphorylation; cellular protein; growth factor; human; lactation; promoter; PCR; regeneration; nerve; muscle; skin; bone tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Early placental insulin-like protein, EPIL/placentin - contains growth factor-like activity useful for e.g. promoting lactation for regeneration of nerve, muscle, skin or bone tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (INSR ) INST ROUSSY GUSTAVE

A related testis-specific factor, RRF-1 (AAW17675), has also been identified. RRF-2 can be produced in transformed host cells for use in the prepn. of antibodies and therapeutic compsns., or as a growth factor for maintaining cells in culture. RRF-2 may be useful for modulating the reproductive

The Zins1 protein was isolated form human placenta, and is believed to be a new version of the mature protein of placentin, having disulphide bonded A and B chains. The protein can be used for stimulating the proliferation of pancreatic islets to increase insulin secretory capacity of mammals. In particular it can be used for the treatment of diabetes. It can also be used for stimulating in vitro proliferation of pancreatic islet cells. It can also be used for production of antibodies and in detection and in detection and

The INSL4 gene is expressed in human embryonic bone tissue and CC ligaments and encodes 3 different EPIL proteins designated EPIL 1, 2 or CC 3. EPIL 1 is a single chain comprising amino acids 18-139, EPIL 2 is a CC comprising amino exids 18-139 and chain B CC comprising amino acids 18-14. The nucleic acids and protein or antibodies against CC proliferation of probes or primers for INSL4 are useful for the CC diagnosis of pathology associated with abnormal differentiation and/or CC cartilage and/or abnormal ossification of forming bones, e.g. costeoporosis or dysplasia. Compositions capable of modulation CC differentiation, regeneration and/or proliferation of bone tissue CC and/or ligament cells are also useful in treating bone disease.

                                                                                                                                                                                                   This sequence represent the early placental insulin-like (EPIL) protein cc encoded by the INSL-4 (insulin-like gene 4) gene. The polypeptide, cc antibodies to the polypeptide, vectors containing the coding sequence and cc probes derived from the coding sequence, can be used to treat tumours, cc tumours of the pancreas, liver, uterus or breast, angiosarcomas, cc qlioblastomas, neuroblastomas, rhadomyosarcomas or leiomyosarcomas, cc to promote vascularisation of specific tissues; to treat retinopathy, macular degeneration, psoriasis, endometricsis, rheumatoid arthritis, cc atherosclerosis or hyperthyroidism; to treat post-angioplastic crestenosis; to promote or inhibit embryo implantation; to prevent and/or treat disorders directly or indirectly connected with a dysfunction in carbohydrate metabolism, especially connected with hypo dycaemia or hyperglycaemia, especially gestational cc diabetes and diabetic complications, especially cardiovascular

Also claimed are synthetic HPP, HP, fragments and analogues. Human relaxin and its analogues are prepd. for therapeutic purposes, esp. in clinical intervention in cases of difficult labour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          123 PheGluGluPheLysLysIleIleLeuAsnArgGlnAsnGluAlaGluAspLysSerLeu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The inventors claim synthetic porcine preprorelaxin and prorelaxin and synthetic A, B and C peptide chains of prolaxin, and a gene for expression of porcine preprorelaxin or prorelaxin, and their subunits (see AAN30186). They also claim a double-stranded DNA fragment for the expression of the signal peptide chain of porcine preprorelaxin comprising a coding strand and a complementary strand corresp. to a defined mRNA sequence (see AAN30187-N30194) which corresp. to the most homologous regions between the pig and rat cDNA sequences. A probe (AAN30195) is also claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A cDNA library was constructed from poly(A)+ RNA isolated from squamous differentiated rabbit tracheal epithelial cells. The cDNA clone, SQ10, isolated from this library had a sequence homologous with those of the genes encoding human and porcine relaxin, i.e. the gene encodes a secreted protein related to preprorelaxin. The protein is a marker for squamous cell differentiation, and is secreted extracellularly. This allows body fluids e.g. sera, saliva and urine to be analysed in diagnosis of squamous cell carcinoma (SCC). Antibodies raised against the protein or immunogenic fragments react with squamous differentiated cells but not undifferentiated cells and are thus specific for a marker of squamous cell differentiated cells see also ARR31959.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US Government-owned NTIS applications to prevent clashes with ongoing US granted patent numbers.                                                                                                                                                                                                                                                                                                                                                               AAQ76309 is the Not I-Bam HI restriction fragment of the plasmid pTR21, which encodes AAR64904, prorelaxin amino acids 12-161. Relaxin is produced by removing the non-naturally occuring leader and C-peptide from PR with a cleavage agent. Relaxin is an ovarian peptide hormone involved in the inhibition of premature labour, cervical ripening and the development of the mammary glands. It
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-JAN-1995

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Дb
      밁
1-137 of methGH, and amp and tet resistance. A portion of the resulting construction (pFEPOTHS) was ligated with a fragment from the original clone encoding the PR C-terminal, and a fragment from pBR322XAP encoding part of the beta-lactamase gene. This produced plasmid pTrpProRel. A StII signal sequence was then fused to the PR gene and a portion including the gene and signal sequence was ligated into a vector identical to pTrpStIIHGH in which the HGH gene had been removed. The resulting construction, pTrpStIIProRel was treated to remove the StII sequence and the first 11 AAs of H2 PR. This was replaced with a synthetic DNA duplex encoding the first 12 AAs of H2 PR (including Aspl), to produce pTrpProRelAsp,
                                                                                                                                                                                                    The plasmid was prepd. from a clone isolated from a cDNA library prepd. from RNA isolated from human corpus luteum, screened with an H1-cDNA probe. A fragment encoding the N-terminal of PR was isolated and was ligated with a 410 bp fragment encoding AAs 17-153 of PR, and a fragment from pHGH2071*L (including the Trp promoter, AAs 1-137 of metHGH, and amp and tet resistance. A portion of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              H2 prorelaxin

                                                                                                                                                                                                                                                                                                                                                                                             The inventors claim the gene for the expression of human preprorelaxin (HPP) and its sub-units. Also claimed are synthetic HPP, HP, fragments and analogues. Human relaxin and its analogues are prepd. for therapeutic purposes, esp. in clinical intervention in cases of difficult labour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Genes for human relaxin, prorelaxin and preprorelaxin prodn. prepd. by recombinant DNA techniques % \left( 1\right) =\left\{ 1\right\}

                     The inventors claim the gene for the expression of human preprorelaxin (HPP) and its sub-units. Also claimed are synthetic HPP, HP, fragments and analogues. Human relaxin and its analogues are prepd. for therapeutic purposes, esp. in clinical intervention in cases of difficult labour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Key
